Market Uptake Support for Intermediate Bioenergy Carriers

Logistics for Bioenergy Intermediates

Intermediate Bioenergy Carriers - IBCs

Biomass is bulky and difficult to handle. Converting it into intermediary products like ***Pyrolysis Oil, Torrefied Biomass and Microbial Oil*** increases the energy density and makes it easier to transport, store and use.

Setting up **4 case studies** across Europe, with large industries and SMEs to determine the most cost-effective routes for biomass and IBC mobilisation.

Involve, engage and support regional stakeholders by sharing knowledge on intermediate bioenergy carriers.

Improving the **trade of intermediate bioenergy carriers** both regionally and on EU level.
